

Anthelion Systems, Inc.

Nano DAC Smart Card

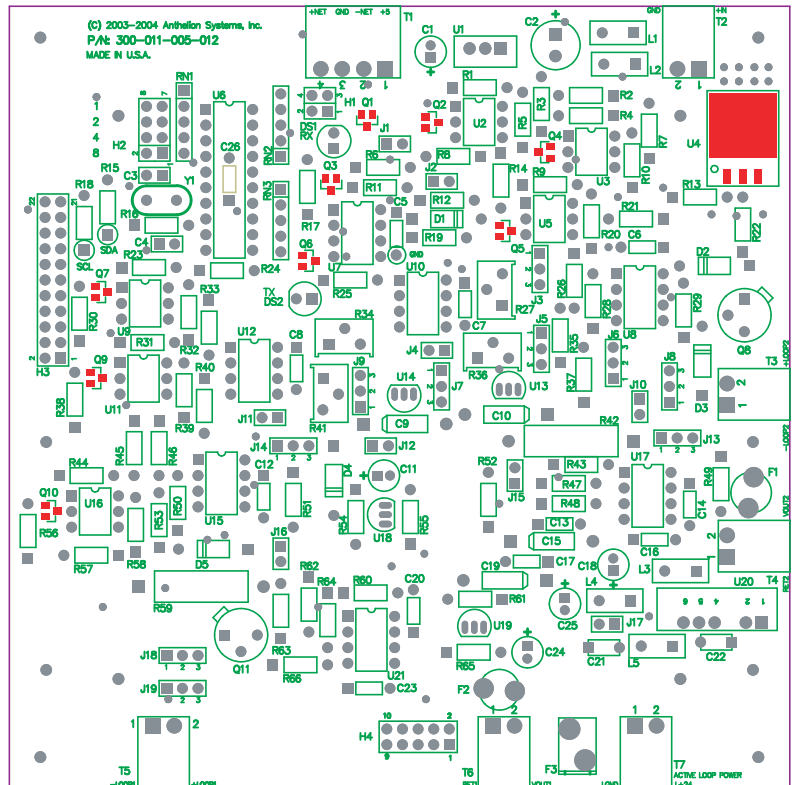

The next generation of low cost, high performance, data acquisition products are now available with Anthelion Systems. The Nano series will solve your companies cost and performance dilemmas.

Our "smart" devices utilize the latest technology in Micro controllers. They provide a great balance between price and performance. The cards were designed to withstand harsh environments with the result being outstanding durability, reliability and accuracy. They utilize the standard ModBus binary protocols for communication and to allow for their data to be retrieved by standard off the shelf Data Acquisition Software.

The Digital Analog Controller card has 2 output channels, 16 bits each. Each channel can be configured independently as a current (4-20 mA) output or a voltage (0-5, 0-10 VDC) output. All points are fuse protected and optically isolated. The card has 4 user programmable shunts to set the card's address (0 to 15).

Other Features:

- Watch Dog timer
- Size: 4" X 4"
- Brown out monitor.
- Low power consumption
- System clock up to 20 Mhz
- RS485 with on board termination and optional Transmit and Receive LED's.

Operating Temperature Range: -20 to 70° C
System Power Requirement: +6 to +12 VDC

LOW COST HIGH PERFORMANCE DISTRIBUTED SYSTEM SOLUTION.
